The human circulatory system functions to transport blood and oxygen from the lungs to the various tissues of the body. The heart pumps the blood throughout the body. The lymphatic system is an extension of the human circulatory system that includes cell-mediated and antibody-mediated immune systems. The components of the human circulatory system include the heart, blood, red and white blood cells, platelets, and the lymphatic system.

Circulatory System Study Notes Flashcards | Quizlet

The human circulatory system circulates blood through two loops (double circulation) – One for oxygenated blood, another for deoxygenated blood. The human heart consists of four chambers – two ventricles and two auricles. The human circulatory system possesses a body-wide network of blood vessels. These comprise arteries, veins, and capillaries.

This new edition has been extensively revised and updated in line with contemporary teaching and dental practice. Over 300 new full colour diagrams map all the anatomical regions that dental students need to know, while the lively and accessible text guides the reader's learning. Throughout Clinical Application Boxes demonstrate how the form and function of anatomy have consequences for clinical practice. Side-lines boxes contain additional descriptions for key anatomical structures. This text is supported by an Online Resource Centre with multiple choice questions, drag and drop figure exercises, and links to key resources to help readers to consolidate and extend their knowledge of anatomy. Anatomy for Dental Students brings together anatomical structure, function, and their relationship to clinical practice, making ideal for today's dental students.

A typical human anatomy and physiology textbook contains over one thousand pages and weighs over six pounds. It is not conducive to quick study or a last-minute review when a student is trying to prepare for exams or class lectures. The author has carefully reviewed the major human anatomy and physiology textbooks and incorporated into this guide the main concepts needed by students to meet the challenges of the course and make the grades they need. These points are provided in bulleted lists for quick mastery of the subject matter. The information is provided on each of the following topics and many more: Anatomy terms and physiology concepts Chemistry, including organic and inorganic Cellular level of organization Cardiovascular system Circulatory system Digestive system Immune system Nervous system Nutrition, metabolism, and body temperature regulation Fluid, Electrolytes, and Acid-base balance Human Anatomy and Physiology will help medical, nursing, and students of other health-related disciplines prepare for their classes and exams by providing review questions at the end of every chapter, along with the answers that will enable them to test their knowledge and skill level.

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

exchanges, and fights plaque. This whimsical glimpse into the human body is fun and informative, perfect for the classroom or the home, and is sure to please the most curious of readers.

Contains the most often used and required facts and formulas on a single reference card. Functions as a study tool, homework aid, or for reference at work. Includes an introduction to cellular biology, tissues, exchanges between the cell and its environment, metabolic and energy producing pathways, the digestive system, respiration, the circulatory system, excretion, the endocrine system, stimulus receptors, the nervous system, the skeletal system, the muscle system, reproduction, genetics, and embryonic development.

An Introduction to Cardiovascular Physiology is designed primarily for students of medicine and physiology. This introductory text is mostly didactic in teaching style and it attempts to show that knowledge of the circulatory system is derived from experimental observations. This book is organized into 15 chapters. The chapters provide a fuller account of microvascular physiology to reflect the explosion of microvascular research and include a discussion of the fundamental function of the cardiovascular system involving the transfer of nutrients from plasma to the tissue. They also cover major advances in cardiovascular physiology including biochemical events underlying Starling's law of the heart, nonadrenergic, non-cholinergic neurotransmission, the discovery of new vasoactive substances produced by endothelium and the novel concepts on the organization of the central nervous control of the circulation. This book is intended to medicine and physiology students.

Students study the major systems of the body: Skeletal, Muscular, Respiratory, Circulatory, Digestive and Nervous systems, in this highly motivating unit. The first part, "Core Lessons", covers the body systems with student notes providing a solid foundation of information. Related activities that utilize the visual arts, creative
