Top-Manager und Vorstandsmitglieder bedeutender Automobilfirmen beschreiben anhand von Fallstudien ihre global anerkannten Erfolgsstrategien im Management ihrer Marken. Ein herausragendes Standardwerk für automobiles Markenmanagement auf nationaler und internationaler Ebene!

The Citroën DS was selected by motoring experts and the public as the most beautiful classic car of the twentieth century. French designer Flaminio Bertoni's 'Goddess' is considered a work of art, a sculpture on wheels. Some even called it the Sydney Opera House of motoring. Released in October 1955 in Paris, France, the first DS19 to arrive in Australia stunned onlookers at the Sydney Royal Easter Show in 1956. Its most notable innovation was the suspension, allowing the car to go 'up and down'. But there were many more outstanding features that made it such a seductive car. Many DS models came to this country from 1956 to 1975. As Citroën celebrates a hundred years since its launch, it is fitting to record the untold stories of the importers, distributors, owners, mechanics, racing drivers, restorers, artists and many more behind the story of the DS in Australia. With over 750 photographs, 120 original illustrations and exhaustive research, the authors have given voice to a definitive history of the Citroën DS in this country, capturing the essence of this stunning design and engineering marvel.

Across the world, professional linguistic inquiry is in full bloom, largely as result of pioneering thinkers who helped rapidly modernize the study of human language in the last century. As the field continues to move forward, further solidifying its position as a conduit of insight into the human condition, it is essential to take stock of the theoretical primitives that have given linguistics its intellectual foundation. This volume does precisely that, inspecting the load-bearing components of the edifice upon which contemporary linguistics has been constructed. The volume's authors – whose expertise spans the Generativist, Functionalist, and Variationist research traditions – remind us of the need to revisit the conceptual bedrock of the field, clarifying and assessing our primary theoretical moves, including those relating to such elemental components as the 'linguistic sign', 'a language', 'structural relations', 'grammatical category', 'acquisition', 'bilingual', 'competence', and 'sociolinguistic variable'.

In spite of all the assistance offered by electronic control systems, the latest generation of passenger car chassis still relies on conventional chassis elements. With a view towards driving dynamics, this book examines these conventional elements and their interaction with mechatronic systems. First, it describes the fundamentals and design of the chassis and goes on to examine driving dynamics with a particularly practical focus. This is followed by a detailed description and explanation of the modern components. A separate section is devoted to the axles and processes for axle development. With its revised illustrations and several updates in the text and list of references, this new edition already includes a number of improvements over the first edition.

You've probably heard the expression, "It's time to cut the cord." Well, it may be time to "cut the cables" at your office and free yourself from your desk and computer. Wireless networks are the waves of the future—literally. *Wireless Networks For Dummies* guides you from design through implementation to ongoing protection of your system and your information so you can: Remain connected to the office in airports and hotels Access the Internet and other network resources in the lunchroom, conference room, or anywhere there's an access point Use your PDA or laptop to query your database from the warehouse or the boardroom Check e-mail wirelessly when you're on the road Get rid of the cable clutter in your office *Wireless Networks For Dummies* was coauthored by Barry D. Lewis, CISSP, and Peter T. Davis, who also coauthored *Computer Security For Dummies*. Barry Lewis is president of an information security consulting firm and an

internationally known leader of security seminars. Peter Davis is founder of a firm specializing in the security, audit, and control of information. Together, they cut through the cables, clutter, and confusion and help you: Get off to a quick start and get mobile with IrDA (Infrared Data Association) and Bluetooth Perform a site survey and select the right standard, mode, access point, channel and antenna Check online to verify degree of interoperability of devices from various vendors Install clients and set up roaming Combat security threats such as war driving, jamming, hijacking, and man-in-the-middle attacks Implement security and controls such as MAC (Media Access Control) and protocol filtering, WEP (Wireless Equivalent Privacy), WPA, (Wi-Fi Protected Access), EAP (Extensible Authentication Protocol), and VPN (Virtual Private Network) Set up multiple access points to form a larger wireless network Complete with suggestions of places to get connected, Web sites where you can get more information, tools you can use to monitor and improve security, and more, Wireless Networks For Dummies helps you pull the plug and go wireless!

This book presents the papers from the latest conference in this successful series on fuel injection systems for internal combustion engines. It is vital for the automotive industry to continue to meet the demands of the modern environmental agenda. In order to excel, manufacturers must research and develop fuel systems that guarantee the best engine performance, ensuring minimal emissions and maximum profit. The papers from this unique conference focus on the latest technology for state-of-the-art system design, characterisation, measurement, and modelling, addressing all technological aspects of diesel and gasoline fuel injection systems. Topics range from fundamental fuel spray theory, component design, to effects on engine performance, fuel economy and emissions. Presents the papers from the IMechE conference on fuel injection systems for internal combustion engines Papers focus on the latest technology for state-of-the-art system design, characterisation, measurement and modelling; addressing all technological aspects of diesel and gasoline fuel injection systems Topics range from fundamental fuel spray theory and component design to effects on engine performance, fuel economy and emissions

This one-stop Mega Reference eBook brings together the essential professional reference content from leading international contributors in the automotive field. An expansion of the Automotive Engineering print edition, this fully searchable electronic reference book of 2500 pages delivers content to meet all the main information needs of engineers working in vehicle design and development. Material ranges from basic to advanced topics from engines and transmissions to vehicle dynamics and modelling. \* A fully searchable Mega Reference Ebook, providing all the essential material needed by Automotive Engineers on a day-to-day basis. \* Fundamentals, key techniques, engineering best practice and rules-of-thumb together in one quick-reference. \* Over 2,500 pages of reference material, including over 1,500 pages not included in the print edition

This paper addresses the issue of threshold effects between public debt and economic growth in the Caribbean. The main finding is that there exists a threshold debt to gross domestic product (GDP) ratio of 55–56 percent. Moreover, the debt dynamics begin changing well before this threshold is reached. Specifically, at debt levels lower than 30 percent of GDP, increases in the debt-to-GDP ratio are associated with faster economic growth. However, as debt rises beyond 30 percent, the effects on economic growth diminish rapidly and at debt levels reaching 55-56 percent of GDP, the growth impacts switch from positive to negative. Thus, beyond this threshold, debt becomes a

drag on growth.

The voyage - the quest, the odyssey, the expedition - is one of the driving forces of civilisation. From ancient times to the present day, human beings have travelled through necessity (wars, persecutions, economic and political pressures), by vocation (religious and humanitarian) and for pleasure (tourism, culture and sport). A voyage intensifies our perception of self, leading us to define and redefine our identity in the liminal space where we are confronted with the Other. This often leads to a change of perspective in our attitudes to culture, identity and politics. The sea is an important feature of the geography of both Ireland and France, so it is perhaps unsurprising that voyages occupy such an important place in the history of both countries. This volume explores aspects of French and Irish society, past and present, through the prism of the voyage. The contributors focus on a wide range of topics, including cultural tourism, literature, gastronomy and sport, in order to trace the ebb and flow of the exchanges between these two countries and their continued influence on one another.
