Unlike Cloudera and Hortonworks, MapR Hadoop Distribution has a more distributed approach for storing metadata on the processing nodes because it depends on a different file system known as MapR File System (MapRFS) and does not have a NameNode architecture. MapR hadoop distribution does not rely on the Linux File system.

MapR had very fast I/O throughput. The write speed was several times faster than what we could achieve with the other Hadoop vendors (Cloudera and Hortonworks). This is because MapR does not use HDFS, which is essentially a "meta filesystem". HDFS is built on top of the filesystem provided by the OS.
