Design and performance analysis of compressor and turbine ... The mechanical design process of a robot with an end-effector typically includes various kinematic performance indices such as workspace, singularity , condition number , and velocity or force manipulability ellipsoids . These indices can be defined based on velocity Jacobian matrices.

Design and performance analysis of a parallel wrist ... Analysis: Simulations show that the smallest worthwhile enhancement of performance for an athlete in an international event is 0.7-0.4 of the typical within-athlete random variation in performance between events. Using change in performance in events as the outcome measure in a crossover study, researchers could delimit such enhancements with a sample of 16-65 athletes, or with 65-260 in a ...

Design and analysis of research on sport performance ... A design of centrifugal pump is carried out and analyzed to get the best performance point. The design and performance analysis of centrifugal pump are chosen because it is the most useful mechanical rotodynamic machine in fluid works which widely used in domestic, irrigation, industry, large plants and river water pumping system.
