The momentum of a price is very easy to calculate. There are couple different versions of the formula, but whichever one is used, the momentum (M) is a comparison between the current closing price (CP) and a closing price "n" periods ago (CPn). 1 ? You determine the value of "n." M = CP - CPn

How to Trade With the Momentum Indicator

In technical analysis, momentum typically refers to the rate of change in a security's price. It may also refer to the rate of change in a security's volume. Given that neither price nor volume can accelerate in one direction in perpetuity, momentum is considered an oscillator. The rate at which price or volume change will ebb and flow over time. When price is in an uptrend, the momentum indicator will be predominantly positive.
