The Rubber Manufacturers Association (RMA) has published revised tire replacement guidelines in its new eight-page manual, Replacement Guidelines for Passenger and Light Truck Tires.

~~RMA Publishes Revised Tire Replacement Guidelines ...~~

This is the tightest tolerance classification and indicates a high precision rubber product. Such moldings require precision molds, fewer cavities per mold, close mix controls, etc., which results in high cost. Optical comparators or other measuring devices may be required to minimize distortion of the rubber part by the measuring instrument.

Tires must be removed from the rim/wheel assembly and inspected for all possible damage—including damage to the inner liner. Tire repairs cannot overlap with other repairs. A rubber stem, or plug, must be applied to fill the puncture injury and a patch must be applied to seal the inner liner. (A plug alone is an unacceptable repair.)
