Option 1: SharePoint

Document Information Panel.

The first option is the classic one and most straightforward one that you can get. You upload or drag and drop a document to a SharePoint document library

File Type PDF Sharepoint Document Update Metadata

and then tag it along, in the Document Information Panel window. Your window might look different depending on what version of SharePoint you use.

~~Metadata Checkout File Type~~

If you want to update a file's metadata, you have to construct an endpoint that reaches the file as a list item. You can do this because each folder is also a list, and each file is

File Type PDF Sharepoint Document Update Metadata

also a list item. Construct an endpoint that looks like this: `https://{site_url}/_api/web/lists/getbytitle('Documents')/items({item_id})` .

File Type PDF Sharepoint Document Update Metadata

Having documents in a file share is not necessarily a bad thing as it can help determine the metadata columns for the associated documents. In figure 1, looking at the existing file share structure, each

File Type PDF Sharepoint Document Update Metadata

document already has
theoretical metadata
assigned to it based off of
where the document lives.
Figure 1: Image of file
share folder structure.
